

We have these entities and relationships:

- Movie: title, length, year, genre
- Score: title, score
- Star: sname, gender, birthday, nationality
- StarIn: title, sname
- Director: dname, gender, birthday, nationality
- DirectedBy: title, dname
- Studio: mname, location
- MadeBy: title, mname

-The Movie has attributes title(KEY), length, year and genre, where the 'title' could not be NULL.

-The Star has attributes sname(KEY), gender, birthday and nationality, where the 'sname' could not be NULL.

-The Director has attributes dname(KEY), gender, birthday and nationality, where the 'dname' could not be NULL.

-The Studio has attributes mname(KEY) and location, where the 'mname' could not be NULL.

-Each movie has exactly one score of movie rating and exactly one director, but could has many stars and be made by many studios. Each star could play a role in many movies. Movies can be directed by same director or made by same studio.

-The gender could only be 'F' or 'M'.
